Education

University of Central Florida — Orlando, FL
Bachelor of Science in Computer Science — *Aug 2023 – May 2026*
Master of Science in Computer Science (Accelerated Program) — *Aug 2026 – May 2027*

Experience

Oracle — June 2026 – Present
Software Engineer Intern — *Pleasanton, CA*

- Proposed and scoped a semantic intelligence layer injecting data-aware context into a customer-facing code-generation plugin for building multi-agent workflows.
- Shipped 2 API services backing a capability-search layer that resolves queries against available agent skills, MCP tools, and SQL queries.

Kyrin Labs LLC — Dec 2025 – Present
Software Engineer, Contract — *Orlando, FL*

- Sole engineer on a real-estate education platform taken from zero to $9K revenue: data model, backend, frontend, and deploy pipeline (React, TypeScript, Supabase, MongoDB).
- Designed hybrid PostgreSQL/MongoDB schemas backing authentication, role-based access, and read-heavy content delivery for 30+ users.

Goldman Sachs — May 2025 – Aug 2025
Software Engineer Intern — *Dallas, TX*

- Redesigned MongoDB aggregation pipelines over 1M+ financial records, reducing network roundtrips and cutting query latency 75%.
- Built a React and Spring Boot reporting dashboard for the accounting division, cutting 10+ hours of manual reporting per week.
- Won 1st of 80 teams at a firmwide AI hackathon with a LangChain ticket-routing service.

Lockheed Martin — Jan 2025 – May 2025
AI Logistics Product Intern — *Orlando, FL*

- Built a RAG pipeline over maintenance and logistics documentation serving 50+ engineers, cutting manual data entry 80%.
- Designed a 5-stage ingestion-to-analysis workflow surfacing part-reliability signals from unstructured maintenance records, securing funding to scale it.

Projects

TenX Hiring — *React, FastAPI, Supabase, Docker, PostgreSQL*

- Placed 3rd of 44 teams at the UCF Joust pitch competition; in active pilot discussions with early customers.
- Co-founded an AI-native technical assessment platform; built the evaluation engine grading candidate submissions on correctness and approach.

Firewatch — *YOLOv8, pgvector, Redis, NVIDIA Jetson Orin, FastAPI, React*

- Engineered a real-time edge AI system on NVIDIA Jetson Orin fusing YOLOv8 detections and thermal telemetry into firefighter risk profiles for dispatchers.
- Built a stateful RAG engine on Redis and pgvector serving short- and long-term semantic context in under 200ms.

Emergent — *Google ADK, FastAPI, Next.js, React*

- Won 1st Overall and 2nd in Google's AI Agent Challenge at KnightHacks 2025 (189 projects), and 1st of 63 at the UCF Innovation Pitch Competition.
- Built a multi-agent crisis simulation orchestrating 50 concurrent persona agents through Google ADK to model emergency response scenarios.

SoundHaus — *Rust, Electron, FastAPI, S3, React*

- Built a version control system for audio projects with content-addressed snapshot indexing and rollback across multi-GB sessions.

Technical Skills

Languages: Python, Java, C, C++, Rust, TypeScript, SQL
Data & Infrastructure: PostgreSQL, MongoDB, Redis, Supabase, S3, Docker, Kubernetes, CI/CD
AI & ML: LangChain, MCP, Google ADK, RAG, Pinecone, pgvector, PyTorch
Frameworks: Spring Boot, FastAPI, React, Next.js, Node.js
